KDE Desktop Live CD

For Intel-compatible, 64-bit computers

Try Fedora—without first installing it—using this bootable live CD.

Ensure that your computer can boot from its CD or DVD drive, then insert the disc, and restart your computer.

Select your language and keyboard layout at the bottom of the greeter screen, then click "Log In".

We hope that you'll enjoy using Fedora. If so, you can copy it to your computer using the "Install to Hard Disk" icon on the desktop.
